Episode 90 Fixed Schedule Productivity

The way we usually work as faculty is to start with the work we have, and work forwards from there, grabbing whatever time is available to get the work done and stretching that time until it fits the work.

Fixed schedule productivity is the opposite: We start with a fixed amount of time, and work backwards to optimize our work to fit the time (2018 n.p.)

Talbert 2018

Robert Talbert (2018)

1. Set a fixed goal of not working past a certain time, either a fixed number of hours per week, or a certain time of the day --- preferably both --- and then
2. Work backwards from that fixed time goal to find productivity strategies to meet it.
